Winter internship

Internships are compulsory and are the subject of an agreement between the student, the teaching team and the company or the lab.

Internship subjects are validated by the Master's teaching team. A specific report for the school is requested, as well as an evaluation by the company or the lab. A defense takes place in front of a jury of teachers.

Lab internship from mid-november to mid-january: students will be placed in labs that are affiliated to Centrale Méditerranée. The main scientific fields addressed are mechanics & nonlinear mechanics, physics & photonics, chemical engineeering, and numerical modeling. More info about the lab here.

In addition to the scientific aspects, the objectives of the internship are to acquire the skills needed to carry out bibliographic analyses, write scientific reports and give oral presentations of scientific work.
