Summer internship

Internships are compulsory and are the subject of an agreement between the student, the teaching team and the company or the lab.

Internship subjects are validated by the Master's teaching team. A specific report for the school is requested, as well as an evaluation by the company or the lab. A defense takes place in front of a jury of teachers.

The summer internship must enable the student to carry out a mission enabling him/her to reveal his/her capacity to assume his/her position as an actor in the design and/or implementation of approaches, methods or processes.
