Train'ing

The Opening Days, are training activities proposed to the students during specific weeks. The proposed topics of these electives are chosen to give an openness to new knowledge, new techniques on a wide variety of subjects and problems, in particular enlightening the concept of complex systems, with various perspectives. Among other examples: introduction to complex systems modeling, modelization of heat transfer, water management, management of complex industrial project, biomimetism, additive fabrication (practical), virtual reality for urban planning (practical), biomedical signals acquisitions and processing (practical)...
